Entry Brochure

Fiberglass

The Research and Development Department utilizes innovative technology to perfect the quality of our doors and components. We offer you the most advanced, high-quality fiberglass door available on the market today.

Composite Stiles provide complete waterproofing for the doors insulation and screw-holding power 2 times better than wood.

Fiberglass Reinforced Skins are resistant to dents, dings, splintering, and corrosion.

An Engineered Composite Bottom Rail prevents moisture from seeping into the door.

Energy Efficiency

1. UWD entry doors start with a strong, rigid polyurethane foam core that meets environmental guidelines and offers maximum thermal protection and dimensional stability.
2. The door bottom weather-strip forms a weather-tight seal to the threshold.
3. Another weather-tight feature is the adjustable threshold. A few turns with a screw driver achieves a proper seal at the bottom of the door.
4. We offer high-performance weather-stripping and bottom sweep upgrades to further strengthen the weather barrier of your entry door.

Caming Finishes

Brass

Nickel

Satin Nickel

Patina

Steel

5. REINFORCING STEEL STRIKE PLATE

attaches behind the wood strike jamb for additional security.

6. COMPOSITE LOCK BLOCK

4" x 10" composite lock block has more screw-holding power than wood. It is injection-molded for uniform size. The door remains flat and strong beneath hardware.

7. STEEL CONSTRUCTION

Galvanized inner and outer steel sheets offer strength and durability. There is no wood to rot, warp, split or bow. It is difficult to even dent our doors.

8. SECURITY IS STANDARD

All steel-edge perimeter means there are no wood edges to crack when force is applied.

- a A wood edge steel door cracks under force of one hit of a 100 lb. test weight
- b Steel Doors do not force open after 7 hits of a 100 lb. test weight for a Grade 40 Security Rating. Your family is secure behind the best safety rating in the industry.

9. PATENTED ADJUSTABLE HINGE PLATE SYSTEM

ensures proper alignment and seal. Normal settling or climate change can effect the door opening. Use a screw driver to make the necessary adjustments. Move the door up or down, in or out without removing the door.
